Selected Writings from the Journal of the Mathematics Council of the Alberta Teachers' Association

Celebrating 50 years (1962–2012) of *delta-K*

Edited by Egan J Chernoff (University of Saskatchewan) and Gladys Sterenberg (University of Alberta)

The teaching and learning of mathematics in Alberta has a long and storied history. An integral part of the past 50 years of history has been *delta-K*, the journal of the Mathematics Council of the Alberta Teachers' Association (MCATA).

This monograph, which presents 50 memorable articles from the journal (10 from each of the past five decades), shares this rich history with a wide range of people interested in the teaching and learning of mathematics and mathematics education. The section for each decade begins with an introduction that provides the historical context and concludes with a commentary from a prominent member of the Alberta mathematics education community. As a result, the monograph provides both a historical account and a contemporary view of trends and issues (such as curriculum and technology) in the teaching and learning of mathematics. It is intended as a resource for a variety of people (including teachers of mathematics, mathematics teacher educators, mathematics education researchers, historians, and undergraduate and graduate students) and as a celebratory retrospective on the work of MCATA.

Selected Writings from the Journal of the Mathematics Council of the Alberta Teachers' Association: Celebrating 50 years (1962–2012) of "delta-K" is a volume in the series The Montana Mathematics Enthusiast: Monograph Series in Mathematics Education, edited by Bharath Sriraman (University of Montana).

The monograph is in development and will be available from Information Age Publishing.
